Re: Notification of T-Mobile Deployment in the 600MHz Band

To whom it may concern,

T-Mobile USA Inc. is planning to deploy commercial wireless services in some or all of our owned Spectrum blocks in the attached list of counties. This is expected to begin in November of 2017. We plan to add to this list continuously. For each county on the attached list, we ask that all use of spectrum in the indicated channel blocks ceases prior to November 1, 2017.

For your information, the following chart illustrates how the new wireless Band 71 overlays on the existing UHF channels 38-51. We wish to minimize interference with the wireless base stations and handsets that will operate in the new band and we want to avoid disruptions to any operations currently in use.

600MHz Band Plan w GBs

We thank you for your assistance in spreading the word to other users of the 600 MHz band.

Please let us know of any questions or concerns at 600MHzFC@T-Mobile.com

Sincerely,

Mark Bishop
Senior Manager- Spectrum Management
